Table A1 Activity Capture Minimum Dataset

Utilisation (Requested from CCG):	Received
No. of appointments available	
By day	Yes
Time of appointment	Yes
By discipline	Yes
Planned/pre-booked vs same day/urgent	Yes
Method of appointment (face-to-face/phone)	Yes
No. of appointments booked	
By day	Yes
Time of appointment	Yes
By discipline	Yes
Age	Yes
Gender	Yes
Registered GP practice	Yes (Bolton no)
Postcode (first part)	Yes
Planned/pre-booked vs same day/urgent	Yes
Method of appointment (face-to-face/phone)	Yes
No. of appointments used (Utilisation)	Bolton issue
By day	Yes
Time of appointment	Yes
By discipline	Yes
Age	Yes
Gender	Yes
Registered GP practice	Yes (Bolton no)
Postcode (first part)	Yes
Planned/pre-booked vs same day/urgent	Yes
Method of appointment (face-to-face/phone)	Yes
Practice-level population data (not requested from CCG):	
Practice level population	Yes
Practice codes	Yes
Whether a GP practice or not	Yes
Registered patient age band	Yes
Deprivation of practice population	Yes
Gender breakdown of practice population	Yes

Table A2 Interview schedule

1	Describe the primary care access arrangements in your area outside standard hours prior to this initiative, and describe the 7-day access arrangements in place now.
2	What is your role in delivering this change?
3	What is/was required to establish 7-day access to primary care in your locality?
4	What steps have been taken so far?
5	How have you communicated the changes to patients?
6	What challenges have been encountered (IT, IG, communications and engagement, workforce, finance, infrastructure)?
7	How have you tackled these challenges?
8	What do you expect will be the impact of this change in access (on patients, staff and other parts of the health and social care system)?
9	How would you measure 'success' in this change?
10	How sustainable are the changes made in your area?

Trafford	5.52 (3.42, 7.66)	15.98 (12.56, 19.51)	3.48 (-0.21, 7.32)	-14.1 (-21.02, -6.58)	-

Incidence Rate Ratio, 95% Confidence interval in parenthesis. Each cell represents a different model. Shaded cells indicate no statistically significant effect detected.

Before and after analysis carried out on pooled cross-sectional data on practice-quarter activity (CCG-day activity for OoH).

Negative binomial count models with adjustment for number of GP practice registered patients estimated to account for the over-dispersed distribution of activity. For each activity outcome, the volume by practice - quarter was regressed on a 2016 year indicator, a set of dummies for quarter to control for seasonality and a set of dummies for CCGs to control for unobserved time-invariant characteristics. The estimated coefficient on the 2016 dummy provided a statistical test for significant changes in service use relative to 2015. The results presented are incidentrate ratios and are interpreted as the relative change in average service activity in 2016 compared to average activity in 2015.

Models are estimated for all schemes combined, and each CCG scheme separately. Hospital analysis sample size: 249 practices over 8 quarters for all schemes combined (n=1992), 50 in Bolton (n=400), 37 in HMR (n=296), 44 in Oldham (n=352), 45 in Stockport (n=360), 41 in Tameside & Glossop (n=328), and 32 in Trafford (n=256).

OoH analysis sample size n=2,198 for all schemes combined: 4 CCGs over 550 days (April-December 2015 and April-December 2016), 550 days for Bolton and Tameside & Glossop, 549 for HMR and Oldham.

Table A10 Changes in hospital service activity outcomes for hub and non-hub practices

Scheme	A&E attendance	A&E self-referral (minor)	Admissions	Admissions ACSC
All

Oldham				
Non-hub practice	4.27 (2.52, 6.04)	1.26 (-0.98, 3.55)	-6.16 (-8.79, -3.46)	-5.83 (-13.20, 2.15)
hub practice	-0.49 (-6.96, 6.45)	-3.58 (-11.58, 5.15)	-11.47 (-19.88, -2.18)	-19.37 (-35.16, 0.27)
Tameside & Glossop				
Non-hub practice	4.26 (2.55, 6.00)	10.33 (7.60, 13.13)	-1.27 (-3.52, 1.03)	-12.09 (-17.50, -6.33)
hub practice	9.18 (8.83, 9.53)	6.62 (5.36, 7.89)	14.26 (10.79, 17.84)	12.92 (3.35, 23.37)
Trafford				
Non-hub practice	5.9 (3.92, 7.92)	16.03 (12.58, 19.57)	3.83 (-0.12, 7.93)	-12.36 (-19.32, -4.79)
hub practice	-0.12 (-11.61, 12.87)	15.13 (-2.32, 35.71)	-1.03 (-1.33, -0.73)	-33.3 (-46.79, -16.38)

Incidence Rate Ratio, 95% Confidence interval in parenthesis. Each cell represents a different model. Shaded cells indicate no statistically significant effect detected.

Before and after analysis carried out on pooled cross-sectional data on practice-quarter activity. Negative binomial count models with adjustment for number of GP practice registered patients estimated to account for the over-dispersed distribution of activity. For each activity outcome, the volume by practice - quarter was regressed on a two 2016 year indicators, one for hub and one for non-hub practices, a set of dummies for quarter to control for seasonality, a hub dummy, and a set of dummies for CCGs to control for unobserved time-invariant characteristics. The estimated coefficient on the two 2016 dummies provided a statistical test for significant changes in service use relative to 2015 for hub and non-hub practices. The results presented are incidence rate ratios and are interpreted as the relative change in average service activity in 2016 compared to average activity in 2015.

Models are estimated for all schemes combined, and each CCG scheme separately. Hospital analysis sample size: 249 practices over 8 quarters for all schemes combined (n=1992), 50 in Bolton (n=400), 37 in HMR (n=296), 44 in Oldham (n=352), 45 in Stockport (n=360), 41 in Tameside & Glossop (n=328), and 32 in Trafford (n=256).

The analysis was not carried out for Stockport separately as no information on hub practices was available and all practices in Stockport are classified as non-hub.

Table A11 Changes in hospital service activity outcomes for gender sub-groups

Activity by gender	All	Bolton	HMR	Oldham	Tameside & Glossop	Trafford
A&E attendance						
Male	1.59 (0.05, 3.16)	-0.31 (-2.36, 1.80)	-0.7 (-2.67, 1.31)	1.3 (-0.95, 3.59)	3.07 (1.26, 4.91)	4.38 (1.69, 7.15)
Female	2.92 (1.19, 4.68)	-2.78 (-5.22, -0.26)	1.24 (-1.16, 3.69)	4.52 (2.18, 6.90)	5.28 (2.94, 7.67)	6.42 (3.83, 9.08)
A&E self-referral (minor)						
Male	1.75 (-0.37, 3.91)	-13.29 (-16.12, -10.37)	-3.41 (-5.75, -1.00)	-1.09 (-3.78, 1.68)	7.81 (4.55, 11.17)	15.37 (11.44, 19.44)
Female	3.17 (0.80, 5.60)	-16.74 (-19.43, -13.96)	-2.51 (-5.19, 0.25)	0.92 (-2.34, 4.30)	11.97 (8.40, 15.65)	16.48 (12.61, 20.49)
Admissions						
Male	-3.46 (-5.53, -1.35)	-2.36 (-7.20, 2.73)	-4.81 (-9.24, -0.16)	-6.1 (-9.94, -2.09)	-3.38 (-6.27, -0.40)	2.92 (-2.41, 8.54)
Female	-3.01 (-5.04, -0.94)	-2 (-5.79, 1.93)	-5.82 (-9.94, -1.52)	-8.68 (-12.40, -4.80)	1.63 (-2.00, 5.39)	3.7 (-0.81, 8.42)
Admissions (ACSC)						
Male	-14.01 (-18.09, -9.74)	-12.61 (-23.98, 0.47)	-17.1 (-25.24, -8.07)	-13.56 (-24.35, -1.24)	-16.73 (-24.28, -8.44)	-15.06 (-25.02, -3.78)
Female	-8.85 (-12.82, -4.70)	-7.97 (-21.16, 7.43)	-10.75 (-20.13, -0.27)	-2.91 (-11.65, 6.68)	-5.75 (-13.62, 2.83)	-13.29 (-22.74, -2.70)

Incidence Rate Ratio, 95% Confidence interval in parenthesis. Each cell represents a different model. Shaded cells indicate no statistically significant effect detected.

Before and after analysis carried out on pooled cross-sectional data on practice-quarter activity. Negative binomial count models with adjustment for number of GP practice registered patients by gender estimated to account for the over-dispersed distribution of activity. For each activity outcome, the volume by gender by practice - quarter was regressed on a 2016 year indicator, a set of dummies for quarter to control for seasonality, a gender dummy, and a set of dummies for CCGs to control for unobserved time-invariant characteristics. The estimated coefficient on the 2016 dummy provided a statistical test for significant changes in service use relative to 2015. The results presented are incidence rate ratios and are interpreted as the relative change in average service activity in 2016 compared to average activity in 2015.

Models are estimated for all schemes combined, and each CCG scheme separately. Hospital analysis sample size: 249 practices over 8 quarters for all schemes combined (n=1992), 50 in Bolton (n=400), 37 in HMR (n=296), 44 in Oldham (n=352), 45 in Stockport (n=360), 41 in Tameside & Glossop (n=328), and 32 in Trafford (n=256). Separate analysis for Stockport was not performed since activity data were not provided.

Table A12 Changes in hospital service activity outcomes for age sub-groups

Activity by age group	All	Bolton	HMR	Oldham	Tameside & Glossop	Trafford
A&E attendance						
0-19	3.04 (1.17, 4.93)	-1.83 (-4.91, 1.34)	-0.29 (-2.98, 2.47)	2.99 (-0.13, 6.21)	6.05 (3.03, 9.16)	4.51 (1.59, 7.51)

Analyses do not include separate estimates for activity with missing age.

Incidence Rate Ratio, 95% Confidence interval in parenthesis. Each cell represents a different model. Shaded cells indicate no statistically significant effect detected.

Before and after analysis carried out on pooled cross-sectional data on practice-quarter activity. Negative binomial count models with adjustment for number of GP practice registered patients by age group estimated to account for the over-dispersed distribution of activity. For each activity outcome, the volume by age-group - practice - quarter was regressed on a 2016 year indicator, a set of dummies for quarter to control for seasonality, a set of age group dummies, and a set of dummies for CCGs to control for unobserved time-invariant characteristics. The estimated coefficient on the 2016 dummy provided a statistical test for significant changes in service use relative to 2015. The results presented are incident rate ratios and are interpreted as the relative change in average service activity in 2016 compared to average activity in 2015.

Models are estimated for all schemes combined, and each CCG scheme separately. Hospital analysis sample size: 249 practices over 8 quarters for all schemes combined (n=1992), 50 in Bolton (n=400), 37 in HMR (n=296), 44 in Oldham (n=352), 45 in Stockport (n=360), 41 in Tameside & Glossop (n=328), and 32 in Trafford (n=256). Separate analysis for Stockport was not performed since activity data were not provided
