MANCHESTER 1824

The University of Manchester

Context

- Since 2013, extended access to general practice in England has been a national health policy priority, with the GP Access Fund (GPAF) and General Practice Forward View (GPFV) providing financial support to CCGs for expanding primary care provisionⁱ.
- In Greater Manchester (GM), the recent roll-out of 7day access arrangements across 7 CCG areas has been evaluated by NIHR CLAHRC GMⁱⁱ. Areas submitted plans for 7-day primary care provision to NHS England in mid-2015, to run throughout 2016. Provision comprised of 'hub' GP practices serving all GP practices within the CCG.

Research Questions

How has 7-day access been implemented in **Greater Manchester?**

How have patients responded to the 7-day access service?

Methods

NIHR CLAHRC GM carried out a mixed methods evaluation:

- 18 in-depth, semi-structured interviews were carried out with NHS commissioners and providers to determine organisational and operational issues arising in the implementation of 7-day access, and how areas had addressed them.
- 7-day activity and appointment data from each of the CCG areas was collected. This data was processed and analysed to provide an assessment of the implementation of the new service.

Extending access to primary healthcare: the rollout of 7-day services in Greater Manchester

Ross, N.¹, Whittaker, W.², Nelson, P.¹, Anselmi, L.², O'Donnell, C.³, Rothwell, K.³ and Hodgson, D.¹

Findings and Discussion

across GM, including differences in interpretation of the policy steer:

- The number of hubs in each area ranged from one to four;
- A range of different estates were used to deliver the service, from small private practices to large, new primary care service centres; • Whilst all areas referred patients via their practices, some also had a central booking
- line for patients to call directly;
- Availability varied in volume and days of appointments (Figure 1);
- Range of services varied from GP appointments only to nurse appointments and diagnostics, although most appointments were used to see a GP;
- Utilisation increased over time (Figure 2) but varied by CCG area (56%-89%); • The demographics of additional appointment users varied from those in core hours
- (Figure 3);
- Different implementation strategies reflected different contexts but also different conceptions of 7-day access.

In a way the slower nature of our implementation has worked okay for us because we've not had to take things away so we've been able to flex our model [Area 6 Commissioner]

> We've got three (systems) in [Area 3]... So within each session we have a GP who comes in and does SystmOne...And, we have another GP or two, who sees patients who are on Vision and EMIS. So we've got a solution... [Area 3 Provider]

The National Institute for Health Research Collaboration for Leadership in Applied Health Research and Care (NIHR CLAHRC) Greater Manchester is a partnership between providers and commissioners from the NHS, industry, the third sector and the University of Manchester. We aim to improve the health of people in Greater Manchester and beyond through carrying out research and putting it into practice. http://clahrc-gm.nihr.ac.uk

Despite agreed standards for 7-day access provision, there was substantial variation

We've not dictated that it has to be booked in a certain way, it just has to be booked because it's not a walk-in service... we've just said there is this capacity and the way in which it's been used is that people want that access [Area 7 Commissioner]

Diverse interpretation and implementation of 7-day access services

> We know it's not equitable, but it's a starting point. And hopefully it will improve, whether that's to four hubs, or... there is more practices... But it's just slow and steady at the moment [Area 2 Provider]

- access.
- conditions.

Figure 2: Appointment uptake over 2016

• Provision and uptake (% used) increased over time

Figure 3: Patient demographics

• Extended access appointment patients were generally younger than core hour patients

Recommendations for policy

The concept of 7-day primary care in GM has been shown to be diverse and complex, both at scale and over time, suggesting any services offered in the future will need to ensure quality and continuity of care, as well as equal

7-day access means many different things; as such there is a need for clarity of vision, as well as allowing 7-day access to be tailored for different local
